

HELP FOR SINGREESI UNICODE 1.8

Overview

Singreesi is all about making Sinhala typing easy. It has been made so easy that you can type in Sinhala just like you are typing an SMS.

For example, if you want to type අම්මා, in Singreesi you would type: *ammaa*

The Sinhala output is in unicode characters, so you can copy them to your blog, etc

Typing is quite intuitive and once you get the touch of it you can immediately start typing like a professional Sinhala typist.

What's new in 1.8?

- ✓ Some major bug fixes including letters like හෘ and ක්කෝ
- ✓ Minimize to tray feature

Use the capital letters for මහාප්‍රාණ.

For letters like ක්‍ර and ත්‍ර use kra, thra, etc

If you want the letters to be apart, like තේර instead of ත්‍ර, you can separate the characters by using the \ key.

Eg:

ත්‍ර - thra
තේර - th\ra

To use ඌ (යංසය), use capital Y like this:

සත්‍රය - sathaYaya

උද්‍යෝගය - udhaYoagaya

Use the mark “|” to toggle between Sinhala and English modes

Eg:

සිංහල වදන් මැද english වදන් - sixhala vadhan maedha |english| vadhan

By clicking the “Copy Sinhala Text” menu item, the Sinhala Unicode text will be placed in the clipboard so you can paste it in another application, like a web browser or word processor.
